1 About this manual

YADA — Yet Another Delivery App — is a web application for on-demand motor courier dispatch. A business raises a delivery request, YADA rings the riders nearest to it until one accepts, and both sides watch the trip through to completion. It replaces the phone calls and text messages that delivery coordination normally runs on.

This manual explains how to use the application. It is written for the people who use YADA every day rather than for the people who build it, and it assumes no technical knowledge beyond being able to open a web browser.

1.1 Who this manual is for

There are exactly two kinds of account in YADA, and this manual covers both.

- **Businesses** — shops, kitchens, pharmacies and anyone else who needs parcels taken from their counter to a customer. Chapter 3 is the business workspace.
- **Couriers** — motor riders who accept delivery jobs and carry them out. Chapter 4 is the courier workspace.

There is no administrator account and no supervisor view. Everything a person can do in YADA, they do for their own account or for a delivery they are personally on.

1.2 How this manual is organised

Table 1. Chapter guide.

CHAPTER	WHAT IT COVERS
1 About this manual	Audience, conventions and the scope of the product.
2 Getting started	What you need, creating an account, signing in, email verification and password recovery.
3 The business workspace	The dashboard, sending a delivery, tracking it, cancelling, history and your profile.
4 The courier workspace	Going online, answering requests, pickup, delivery, completion, trips and settings.
5 How dispatch works	How YADA chooses which riders to ring, and in what order.
6 Reference	Delivery statuses, ratings, and the distances and timings the system uses.
7 Privacy, safety and your data	What each side can see, location reporting and closing your account.
8 Troubleshooting	Common problems and what to do about them.
9 Glossary	The terms used throughout this manual.

1.3 Conventions used in this manual

Table 2. Typographic and callout conventions.

CONVENTION	MEANING
Bold text	The name of a button, a field, a tab or a screen exactly as it appears in the application — for example, tap Accept .

CONVENTION	MEANING
Screen → Section	A path through the interface. Settings → Theme means open Settings, then open the Theme row.
NOTE	Extra information that is useful but not essential to completing the task.
TIP	A shortcut or a piece of practical advice.
IMPORTANT	Something that will cost you a delivery, or someone else's time, if you get it wrong.

Screenshots of the business workspace are taken on a desktop browser, and screenshots of the courier workspace are taken on a phone, because that is how each side is used in practice. Both workspaces work on both, and the layout adapts to the screen.

NOTE Sample names, addresses, order values and ratings in the screenshots are illustrative. Your own screens will show your own data.

1.4 What YADA does and does not do

YADA is a dispatch and tracking tool. Specifically, it does the following.

- Raises a delivery request from a business and finds a nearby rider for it, automatically.
- Tracks the rider's position and the stage of the trip, live, on both sides.
- Records what was delivered, by whom, when, and how long it took.
- Collects a rating from each side after the trip.

It deliberately does none of the following.

- **It does not price deliveries.** No fee is calculated, quoted or displayed anywhere.
- **It does not take payment or settle anything.** Whatever the business and the rider agree between them happens outside YADA.
- **It does not tell the rider what the order is worth.** The order value is recorded so a disputed handover has a number attached to it; it is never shown on a courier's screen.

IMPORTANT YADA does not handle money. Any arrangement about payment for a delivery is between the business and the rider, and nothing about it is recorded, enforced or guaranteed by the application.

2 Getting started

2.1 What you need

Table 3. What you need before you start.

REQUIREMENT	DETAIL
A device	Any phone, tablet or computer with a modern web browser. Riders will want a phone; businesses usually prefer a laptop or a tablet on the counter.
A browser	A current version of Chrome, Edge, Firefox or Safari. YADA is a website — there is nothing to install from an app store.
An internet connection	Required throughout. Position updates, offers and status changes all travel over the network.

REQUIREMENT	DETAIL
Location access	Required for couriers, and requested by the browser the first time you go online. Businesses do not need it.
An email address	Used to sign in, to verify the account and to recover a forgotten password.
A phone number	Required for both roles. It is how the other side of a delivery reaches you while it is in progress.

TIP On a phone, open YADA in the browser and use your browser's **Add to Home Screen** option. It then opens full-screen with its own icon, like an installed app. There is nothing to download from an app store.

2.2 The two workspaces

YADA is one application with two entirely separate workspaces. Which one you see is decided by the role you chose when you signed up, and it cannot be switched afterwards. A business account always lands on the business dashboard; a courier account always lands on the courier home screen. There is no screen where the two mix.

Figure 1. The YADA landing page. *Get started* leads to sign-up and sign-in.

IMPORTANT Choose your role carefully at sign-up. The role is set once, on the server, and there is no setting anywhere that changes it later. If you pick the wrong one, close the account and sign up again with the correct role.

2.3 Creating a business account

From the landing page, choose **Get started**, then select the **Sign up** tab.

1. Choose **Business** on the role toggle at the top of the form.

2. Enter your **Business Name**. This is the trading name riders will see when they are offered your delivery, so use the name on your sign rather than a registered company name.
3. Enter your **Work email**. This becomes your sign-in name and the address verification and password resets are sent to.
4. Enter your **Phone number**. Riders use this to reach you about a pickup in progress.
5. Choose a **Password** of at least 8 characters.
6. Select **Create account**.

Figure 2. The sign-in and sign-up screen, with the **Business** and **Courier** role toggle.

You are taken straight to your dashboard. Before you can send your first delivery you will be asked to set your dispatch address — the counter every delivery leaves from. That is described in section 3.2.

2.4 Creating a courier account

Courier sign-up asks for two things a business is not asked for, so it runs in two steps.

Step 1 — your details

1. Choose **Courier** on the role toggle.
2. Enter your **Full Name**, **Email**, **Phone number** and a **Password** of at least 8 characters.
3. Select **Continue**.

Step 2 — your bike and your photo

1. Enter your **Number plate**, for example GT 4521-20. The business sees this while they wait, so they know which bike at the counter is yours.
2. Add a **Profile photo**. The business sees this the moment you accept their delivery, so they know who to hand the parcel to. Choose a clear photo of your face.
3. Select **Create account**.

NOTE Your photo is resized in your own browser before it is sent, to roughly the size of an avatar. The full-resolution original never leaves your device.

2.5 Signing up with Google

Where Google sign-in is enabled, **Continue with Google** creates an account from your Google profile. Google supplies your name, your email address and often a picture; it cannot supply a phone number, a number plate, or which workspace you came for. YADA therefore shows a short **Almost there** screen after the redirect, which asks for whatever is missing:

- The role — **Business** or **Courier** — if the button you used did not already carry it.
- Your phone number.
- For couriers, the number plate and a profile photo. If Google supplied a picture, **Use this photo** adopts it in one tap.

You cannot reach either workspace until this screen is complete. It is asked once.

2.6 Verifying your email address

After sign-up, YADA emails you a verification link. Verification is a soft gate: it never stops you signing in, and it never stops you looking around your own workspace. It gates exactly the two actions that reach another person.

Table 4. What email verification gates.

ROLE	BLOCKED UNTIL YOU VERIFY
Business	Sending a delivery request.
Courier	Going online to receive requests.

Open the message and select the link. If it has not arrived, check the spam folder first, then use the resend option on the banner in your workspace.

2.7 Signing in and signing out

Go to the YADA address, select **Sign in**, and enter your email and password. YADA remembers the session, so on your own device you will usually not have to sign in again.

- **Business** — open the account menu from the avatar at the top right of any screen, then choose **Sign out**.
- **Courier** — open **Settings** from the tab bar and select **Sign out** at the bottom.

2.8 Resetting a forgotten password

1. On the sign-in screen, select **Forgot password**.
2. Enter the email address on the account and submit.
3. Open the email you receive and select the link.
4. Enter a new password of at least 8 characters and confirm it.

Figure 3. Setting a new password from a reset link.

NOTE Reset links are single-use and expire. If yours has stopped working, the screen will say so — request another one from the sign-in page.

3 The business workspace

The business workspace has three destinations, named across the top of every screen: **Dashboard**, **Request** and **History**. Your account and your settings are behind the avatar at the top right.

3.1 The dashboard

The dashboard is the board of everything happening right now. It opens on three figures for the day, followed by the list of deliveries that are still running.

Figure 4. The dashboard, with the day's summary figures above the list of active requests.

Table 5. The business dashboard at a glance.

ELEMENT	WHAT IT TELLS YOU
Active deliveries	How many of your deliveries are in flight right now — searching for a rider, or already assigned to one.
Avg. pickup time	How long, on average, riders have taken to reach your counter today.
Delivered today	Deliveries completed since midnight.
Active requests	One row, or one card, per delivery in flight: the order, the rider, the destination, the time taken so far and the current status.

ELEMENT	WHAT IT TELLS YOU
Table / Board	Switches the active requests between a compact table and a card board. Both show the same deliveries.
New request	Starts a new delivery request. Same destination as the Request tab.

Selecting any active request opens a panel with its destination, its rider, the pickup time and the order details, and a map of where the rider is. **Open tracking** takes you to the full tracking screen for that delivery.

3.2 Setting your dispatch address

Every delivery you send leaves from one place: your dispatch address. YADA asks for it the first time you open **Request**, and you can change it later under the avatar menu, in **Account** → **Dispatch address**.

1. Search for the address, or tap the map to drop a pin on your entrance.
2. Check the name YADA gives the pin. Dropped pins are named against local landmarks, so the result reads like a place in Kumasi rather than a pair of coordinates.
3. Save it.

IMPORTANT A delivery request cannot nominate its own pickup point. Every request you send starts at this address, so put the pin where a rider should actually stop — the entrance customers use, not the middle of the building.

3.3 Sending a delivery request

Open **Request**. The pickup is filled in for you; the rest of the screen is about where the parcel is going and what is in it.

Figure 5. The new delivery request screen. The pickup is fixed; the destination is searched or dropped on the map.

1. Set the destination. Type the customer's address into **Where is this going?** and pick a prediction, or tap the map to drop a pin. You can nudge the pin afterwards if the search put it slightly off.
2. Enter the **Order Name** — what is actually being sent, for example “Pancakes × 4”. This is what the delivery is called everywhere afterwards, including in your history.
3. Enter the **Price (GH¢)** — what the order is worth. This is a record, not a delivery fee, and the rider is never shown it.
4. Check the rider count above the order fields. It tells you how many riders are online within about ten minutes of your counter, before you commit to anything.
5. Select **Request a rider**.

As soon as both points are set, YADA works out the distance and the driving time between them and stores that estimate with the trip. That is what lets the dashboard show an ETA before the rider has sent a single position.

NOTE The riders drawn on the map before you book are anonymous by design. There are no names, no ratings and no identities on those markers, and the positions are rounded. The map is showing you supply, not people.

3.4 Tracking a delivery

Sending a request takes you straight to its tracking screen. Every delivery has its own — you can return to it at any time from the dashboard.

3.4.1 Finding a rider

The request now rings riders. The map shows the search widening out from your counter, and the bar beneath **Finding a rider near you** drains as the search window runs down. The whole search lasts 60 seconds. Chapter 5 explains what is happening underneath.

Figure 6. A request searching for a rider. The rings on the map widen as the search does.

While the search is running you can **Cancel request** at any time.

3.4.2 A rider is on the way

When a rider accepts, the screen changes to show who they are: their name, their photo, their rating and their number plate, with a call button beside them. The map switches to their live position, moving towards your counter, with an ETA.

Figure 7. A rider assigned and on the way to the pickup.

3.4.3 Confirming the handover

The pickup phase ends with you, not with the rider. When the rider's own position shows them at your counter, a **Confirm pickup** button appears on the tracking screen. Hand the parcel over, then confirm. The rider cannot start the delivery until you do.

IMPORTANT Confirm pickup only after the parcel is physically in the rider's hands. The confirmation is what starts the delivery leg and what the record of the handover rests on. The button appears only when the rider is at your counter, so it cannot be pressed from the road.

3.4.4 On the road

Once you have confirmed, the trip moves to the delivery leg. The map follows the rider towards the customer and the ETA updates as they go.

Figure 8. A delivery in progress, tracked to the drop-off.

3.4.5 Delivered, and rating the rider

The rider marks the delivery complete at the drop-off, and your screen turns over to a summary: the order, the rider, and when it was delivered. Beneath it you are asked to rate the rider from one to five stars, with an optional note.

Figure 9. The completed delivery, with the rating prompt.

Ratings feed the dispatcher. A rider's rating is one of the things that decides how early they hear about your next request, so rating honestly is worth the ten seconds it takes. If you skip it now, you can still rate the delivery later from **History**.

3.5 Cancelling a delivery

Either side can call a delivery off, but only up to a point.

Table 6. When a business can cancel.

STAGE	CAN YOU CANCEL?
Searching for a rider	Yes — Cancel request on the tracking screen.
A rider has accepted and is on the way	Yes — Cancel delivery on the tracking screen.
The rider has reached your counter	No. The button is gone.
The parcel has been handed over	No.

The cancel button disappears the moment the rider arrives, and that is deliberate. Someone is then standing at your counter for this delivery, and calling it off at that point is a conversation rather than a button. Talk to the rider.

3.6 When no rider is found

If the 60-second search ends with nobody accepting, the request does not disappear — it comes back to you. The tracking screen offers two things:

- **Ring riders again** — starts a fresh search for the same request. Riders who already declined this delivery are not asked a second time.
- **Cancel request** — withdraws it.

TIP If a search fails twice in a row, there is probably nobody online near you at that moment. The rider count on the **Request** screen tells you before you spend another minute on it.

3.7 Running several deliveries at once

YADA is built for a counter with several orders leaving in the same few minutes. You can have as many deliveries in flight as you have orders.

- Each request runs its own search, on its own clock, with its own set of riders.
- Two requests raised seconds apart do not queue behind one another.
- Each has its own tracking screen, and all of them appear together on the dashboard.

There is nothing to configure for this. Send the second request the same way you sent the first.

3.8 History

History is the record of every delivery you have completed or cancelled. Filter it by **Status**, or search by order name to find one delivery.

The screenshot shows the 'History' tab in the YADA interface. At the top, there are navigation links for 'Dashboard', 'Request', and 'History' (which is active). A user avatar 'FK' is in the top right. Below the navigation, there's a 'History' section with a status filter dropdown set to 'All' and a search bar for 'Search order #'. A table lists delivery orders with columns: ORDER, ITEM, VALUE, RIDER, DESTINATION, COMPLETED, and STATUS. One order is shown: #4E94, Pancakes x 4, 6H€55.00, Kwabena Mensah, KNUST Commercial A..., Sep 7, 2:35 AM, and a green 'Delivered' status.

ORDER	ITEM	VALUE	RIDER	DESTINATION	COMPLETED	STATUS
#4E94	Pancakes x 4	6H€55.00	Kwabena Mensah	KNUST Commercial A...	Sep 7, 2:35 AM	Delivered

Figure 10. Delivery history, filterable by status and searchable by order.

Selecting a row opens the full record: the order and its value, the destination, the pickup, the rider, when it was completed and any notes. If you have not yet rated the rider on that delivery, you can do it from here.

3.9 Your account and profile

Open the avatar at the top right, then **Account**. Everything about your business lives on one screen.

The screenshot shows the 'Favoire Kitchen' business account page. At the top, there are navigation links for 'Dashboard', 'Request', and 'History'. A user avatar 'FK' is in the top right. The page title is 'Favoire Kitchen' with the address 'Ayeduae Gate, near KNUST, Kumasi'. Below the title, there are three tabs: 'Profile' (active), 'Location', and 'Password'. The 'Profile' section includes a 'Profile photo' area with a placeholder 'FK' and an 'Add a photo' button. Below that is a 'Rider rating' section showing 'No ratings yet'. The 'Business details' section includes fields for 'Business name' (Favoire Kitchen), 'Phone number' (+233 24 123 4567), and 'Email' (yada-e2e-kitchen@example.com). A 'Save changes' button is at the bottom of this section. At the very bottom, there is a 'Delete account' section with a warning icon and a 'Delete account' button.

Figure 11. The business account screen.

Table 7. The business account screen.

SECTION	WHAT YOU CAN DO
---------	-----------------

SECTION	WHAT YOU CAN DO
Profile photo	Upload or remove the picture riders see when they are offered your delivery.
Rider rating	The average rating riders have given you. It is informational — it does not affect how quickly your requests are answered.
Business details	Change your trading name and phone number. The email address is fixed and shown read-only.
Dispatch address	Move the counter every delivery leaves from. See section 3.2.
Change password	Enter your current password, then the new one twice.
Delete account	Closes the account permanently. See section 7.3.

4 The courier workspace

The courier workspace is built to be used one-handed, on a phone, next to a bike. The controls are large, the screens are shallow, and everything you need is one tap from the bar at the bottom.

4.1 Getting around

Table 8. The four courier tabs.

TAB	WHAT IS THERE
Home	The map, your online switch, and any request being offered to you right now.
Orders	Requests waiting for an answer, and the delivery you are currently on.
Trips	Your completed trips, with your totals and your rating.
Settings	Your account, alerts, theme, language and the legal pages.

NOTE While you are on a delivery, the pickup and delivery screens take over the whole display and the tab bar goes away. That is intentional: there is one thing to do, and it is on the screen.

4.2 Going online

You receive no requests until you go online. Open **Home** and select **Go online**. Your browser will ask permission to use your location the first time; you must allow it, because dispatch cannot rank you without knowing where you are.

Figure 12. Left: *Home* while offline. Right: a request being offered, with the timer at the top right and the distance to the pickup.

The pill on the map shows your state — **Offline** or **Online**. **Go offline** stops requests and stops your position being reported. Home also shows what you have done today.

IMPORTANT Your email address must be verified before you can go online. Until it is, the switch will tell you so. Verification is a single link in the email YADA sent you when you signed up.

4.3 Answering a request

When a delivery is offered to you, a card rises from the bottom of **Home** and the alert sounds. The card tells you everything you need to decide:

- **Pickup** — the business, its address, and how far away it is. This is the distance the dispatcher actually ranked you by.
- **Dropoff** — where the parcel is going, and the length of the trip.
- Any **note** the business added to the request.
- A **countdown** in the top right, showing how long the offer stands.

Two controls: **Accept**, and the **X** beside it to decline.

Table 9. Answering an offer.

ACTION	WHAT HAPPENS
Accept	The job is yours. YADA takes you to the pickup screen and tells the business who is coming.

ACTION	WHAT HAPPENS
✕ (decline)	The offer disappears and YADA moves on. You will not be offered this same delivery again, even if the business rings riders a second time.
Let the timer run out	The same as declining, except quieter. The offer closes on its own.

NOTE Several riders are rung for the same request at once, so it is normal for an offer to be taken by somebody else while it is on your screen. If that happens you will be told the job has gone. Nothing has gone wrong, and it counts against you in no way at all.

4.4 The Orders screen

Orders shows requests waiting for an answer under **Incoming requests**, and the delivery you are currently on above them. If you are offline, or nothing is waiting, it says so and points you back to **Home**.

Figure 13. Left: the **Orders** screen with nothing waiting. Right: the pickup screen after accepting, showing the route to the business.

4.5 Collecting the parcel

Accepting takes you to the pickup screen. It shows the business, its address, the route there, and a call button if you need to reach them.

You do not have to tell YADA you have arrived. When your own position shows you at the shop, the business's screen updates by itself and a **Confirm pickup** button appears on their side. The badge on your screen changes from **Heading to pickup** to **Parcel collected** once they confirm the handover.

1. Ride to the business.
2. Collect the parcel. Wait for the business to confirm the handover on their screen.
3. Select **Start delivery**.

Figure 14. Left: the parcel collected, waiting for **Start delivery**. Right: the delivery leg, with the route to the customer.

If you cannot take the job after all, **Cancel — I can't take this job** hands it back. The delivery returns to the board for another rider rather than being cancelled, because the business still needs their parcel moved. Use it as early as you can.

4.6 Delivering

The delivery screen holds the drop-off address, the route to it and a navigation button that opens the address in your maps application. The business can be called from here too.

When you reach the customer and hand the parcel over, select **Mark delivered**. The button works only when your position is at the drop-off, so a delivery cannot be closed from the road.

IMPORTANT If **Mark delivered** will not respond, you are not close enough to the drop-off, or your phone has not sent a fresh position. Check that location is still allowed for YADA in your browser, and that you are at the address rather than at the end of the street.

4.7 Finishing, and rating the business

Completing a delivery opens a summary: the distance, the time it took, who it was for and what the order was. You are then asked to rate the business from one to five stars, with an optional note.

Figure 15. Left: the completion summary and rating prompt. Right: **Trips**, with the running totals at the top.

Back online returns you to Home, ready for the next request. **View trips** takes you to your history instead.

4.8 Taking a second delivery on the back of the first

You keep hearing offers while you are carrying a parcel, but only the ones that make sense: a request is offered to a busy rider only when its pickup is within about 400 metres of where the delivery you are on ends. A rider finishing on one street can take the next job on the same street instead of going idle and starting again.

NOTE Riders who are free keep priority. A busy rider's alert opens a few seconds after a free rider's, so chaining a second job never costs an idle rider the work.

4.9 Trips

Trips is your record. Four figures across the top:

Table 10. The Trips summary.

FIGURE	MEANING
Trips	Deliveries you have completed, in total.
Today	Deliveries you have completed since midnight.
Distance	How far you have carried parcels, in total.

FIGURE	MEANING
Rating	The average rating businesses have given you.

Below them is every trip you have run, newest first. If you did not rate a business at the time, you can still do it from here.

4.10 Settings

Figure 16. Left: *Profile & Settings*. Right: *the notification settings, including the alert sound.*

Table 11. *The courier settings rows.*

ROW	WHAT IT DOES
Name & password	Change your display name and your password.
Phone	Change the number businesses reach you on.
Email	The address on your account.
Number plate	Change the plate businesses look for at the counter.
Notification Settings	Turn the alert sound on or off, and choose which alerts you want.
Theme	Light, dark, or follow the device.
Privacy Policy / Terms of Service	The legal pages.
About Us	Read about the product.
Sign out	Ends the session on this device.

Figure 17. Left: editing your courier profile. Right: the theme picker.

IMPORTANT Alert sound is the one setting worth checking before your first shift. YADA makes the alert tone in the browser itself, and phones silence browser audio in various ways. Test it somewhere quiet before you rely on hearing an offer arrive.

5 How dispatch works

This chapter explains what happens between a business selecting **Request a rider** and a courier's phone sounding. You do not need any of it to use YADA, but it answers most of the questions both sides ask in their first week.

5.1 The search widens on its own

A request does not go out to everybody at once. It starts with the riders closest to the counter and widens from there, on a fixed clock.

Table 12. The expanding rings of a dispatch search.

TIME SINCE THE REQUEST	RIDERS BEING RUNG	WHAT THE BUSINESS SEES
0 – 15 seconds	Within 400 m of the pickup	The first, tightest ring on the map.
15 – 35 seconds	Within 800 m	The ring widens.
35 – 60 seconds	The whole service area, up to 6 km	The ring widens again.

TIME SINCE THE REQUEST	RIDERS BEING RUNG	WHAT THE BUSINESS SEES
After 60 seconds	Nobody	The search has ended. Ring riders again appears.

If the 60 seconds pass with nobody accepting, the request returns to the business rather than being silently dropped. Nothing is lost; it simply waits for a decision.

5.2 Who hears about a delivery first

Within a ring, riders are not all alerted at the same instant. Each rider's offer opens a moment decided by three things:

- **How near they are.** Nearer riders hear first.
- **Whether they are already carrying a parcel.** A free rider hears a few seconds before a busy one.
- **Their rating.** A higher-rated rider hears slightly earlier than a lower-rated one in the same ring.

Nobody is excluded outright. A rider who is further away, or busy, or newly signed up, still gets the offer — a little later. New riders are neither given the top of the board nor buried beneath it: an account with no ratings yet is treated as average until it has a record of its own.

5.3 A decline is remembered

When a rider declines a delivery, or lets the offer time out, that decision sticks to that delivery. If the business rings riders again, that rider is not asked a second time. Declining costs you nothing, and it does not affect your rating or your standing.

5.4 When two riders accept at once

Because several riders are rung for the same request simultaneously, two riders tapping **Accept** at the same moment is normal rather than exceptional. YADA settles it the only way that is safe: the first tap to reach the server takes the job, and the second is told immediately that it has gone. A delivery is never assigned twice.

6 Reference

6.1 Delivery statuses

A delivery moves through a fixed sequence of stages. Both sides see the same stage at the same time, in the words appropriate to their screen.

Table 13. Delivery stages, and what advances each one.

STAGE	WHAT IT MEANS	WHAT MOVES IT ON
Searching	The request has been raised and riders are being rung.	A rider accepts — or 60 seconds pass with nobody.
Assigned	A rider has taken the job and is on the way to the pickup.	The rider's own position shows them at the counter.
Arriving / at the counter	The rider is at the business.	The business confirms the handover.

STAGE	WHAT IT MEANS	WHAT MOVES IT ON
In progress	The parcel is with the rider, on the way to the customer.	The rider marks it delivered at the drop-off.
Delivered	The delivery is complete.	Nothing. Both sides may still rate it.
Cancelled	The delivery was called off before the handover.	Nothing.

NOTE Arrival at the pickup is observed, not declared. Neither app asks the rider to press “I have arrived” — their own position fix does it. That is why the business's **Confirm pickup** button can appear without the rider touching anything.

6.2 Ratings

Both sides rate each other, once, after the delivery is complete.

Table 14. How the two ratings are used.

RATING	WHO GIVES IT	WHAT IT AFFECTS
Rider rating	The business, after delivery	How early that rider hears about future requests.
Business rating	The rider, after delivery	Nothing in dispatch. It is informational — businesses are not ranked for a job the way riders are.

A rating can be given later from **History** (business) or **Trips** (courier) if you skipped it at the time.

6.3 Distances and timings

These are the numbers the system works to. They are listed here because both sides occasionally need to know why a button has not appeared yet.

Table 15. System distances and timings.

SETTING	VALUE	WHERE IT MATTERS
First ring	400 m	Who is rung in the first 15 seconds of a search.
Second ring	800 m	Who is rung from 15 to 35 seconds.
Match radius	6 km	The widest a search ever goes.
Search window	60 seconds	How long a request rings before it returns to the business.
Pickup proximity	About 15 m	How close a rider must be for Confirm pickup to appear on the business's screen.
Drop-off proximity	About 31 m	How close a rider must be for Mark delivered to work.
Chaining distance	400 m	How near a new pickup must be to your current drop-off for you to be offered it while busy.
Nearby riders	About 10 minutes' ride	The area the rider count on the Request screen covers.
Position reporting	Every 10 s idle, every 2.5 s on a trip	How often a courier's position is sent while online.

7 Privacy, safety and your data

7.1 What each side can see

Table 16. Who sees what.

INFORMATION	BUSINESS SEES	COURIER SEES
Business name, photo and address	Own	Yes, once assigned
Rider name, photo, plate and rating	Yes, once assigned	Own
Phone number of the other side	Yes, during the delivery	Yes, during the delivery
Destination address	Yes	Yes
Order name	Yes	Yes
Order value	Yes	No — never
Rider positions before booking	Anonymous markers only	n/a

IMPORTANT A courier is never shown what an order is worth. A rider carries the parcel either way, and a value on their screen is a reason for somebody to take it from them. The field exists so a disputed handover has a number attached to it, and it stays on the business side.

The riders a business sees on the map before booking are anonymous by construction. There are no names, no ratings and no identities behind those markers, and each position is rounded to roughly eleven metres. The map shows how much supply is nearby, not who is nearby.

7.2 Location reporting

A courier's position is reported only in the situations that need it.

- **Only while you are online, or on a trip.** Go offline and reporting stops.
- **At two rates.** Roughly every ten seconds while you are waiting, and every two and a half seconds while you are carrying a delivery, so the business's map keeps up with you.
- **To the delivery you are on.** A business sees the position of the rider carrying their parcel, and no one else's.

Businesses do not report a position at all. Their location is the fixed dispatch address they set once.

7.3 Closing your account

You can close your own account, from **Account** → **Delete account** on the business side, or from **Settings** on the courier side. You will be asked to type your email address to confirm.

Closing an account:

- Removes your credentials, your sessions, your email address, your phone number and your photo, and signs you out everywhere.
- Keeps your name on past deliveries, so the other side of each one keeps their own history and their ratings.
- Is refused while a delivery of yours is still in flight. Finish or cancel it first.

IMPORTANT Closing an account cannot be undone. There is no restore.

8 Troubleshooting

Table 17. Common problems and their remedies.

PROBLEM	LIKELY CAUSE	WHAT TO DO
I signed in but cannot send a delivery or go online.	Your email address is not verified yet.	Open the verification email and select the link. Check the spam folder, then resend from the banner in your workspace.
Go online does nothing, or asks about location.	The browser has not been given location permission.	Allow location for the YADA site in your browser settings, then try again.
I am online but receive no requests.	No business near you has raised one, or you are outside the service area.	Stay online and within the KNUST / Ayeduse area. Requests only reach riders within 6 km of a pickup.
I did not hear the alert for an offer.	The alert sound is off, or the phone silenced browser audio.	Check Settings → Notification Settings → Alert sound , and test it somewhere quiet before a shift.
The search ended without finding a rider.	Nobody online was near enough, or everybody near enough declined.	Select Ring riders again . Riders who declined are not asked twice, so a repeat search reaches different people.
Confirm pickup has not appeared.	The rider is not close enough to your counter yet, or their last position is stale.	Wait for them to arrive. If they are standing in front of you and it still has not appeared, ask them to check their phone has location on.
Mark delivered will not respond.	You are not close enough to the drop-off address.	Move to the address itself rather than the end of the street, and check location is still allowed for YADA.
A job disappeared while I was reading it.	Another rider accepted it first.	Nothing to do. Several riders are offered the same request at once, and this counts against you in no way.
The map is empty or will not load.	A connection problem, or the mapping service is unavailable.	Check your connection and reload. Addresses and landmark names still work when the map does not.
I cannot cancel a delivery.	The rider has already reached the counter.	From that point it is a conversation rather than a button. Call the rider — the call button is on the tracking screen.
I chose the wrong role at sign-up.	The role is set once and cannot be changed.	Close the account and sign up again with the correct role.
A reset link says it does not work.	The link has already been used, or it has expired.	Request a new one from Forgot password on the sign-in screen.

9 Glossary

Table 18. Glossary of terms.

TERM	MEANING
Business	An account that raises delivery requests. One of the two roles in YADA.

TERM	MEANING
Courier / rider	An account that accepts and carries out deliveries. The other role. The two words are used interchangeably in this manual and in the application.
Delivery request	One parcel, going from a business's dispatch address to one destination.
Dispatch	The process of finding a rider for a request: who is rung, in what order, and for how long.
Dispatch address	The fixed pickup point every one of a business's deliveries leaves from.
Drop-off	The destination of a delivery.
Handover	The moment the parcel passes from the business to the rider. Confirmed by the business.
Offer	A request presented to one rider, with a countdown, to accept or decline.
Pickup	The business end of a delivery.
Ring	The distance a search currently covers. A search moves through three rings before it times out.
Release	A rider handing back a job they had accepted, so it returns to the board for someone else.
Service area	The KNUST and Ayeduase area of Kumasi, within which YADA matches deliveries.
Workspace	The set of screens belonging to one role. There is a business workspace and a courier workspace, and an account only ever sees one.
